

BillByte

This manual targets Enterprise owners, Multi-Service Providers (MSPs), Cloud Service Brokers (CSBs) and anyone who is anyway related with BillByte and to learn its features and functionality.

Introduction

Bill Byte is a full service billing and monetization platform catering specifically to the needs of Microsoft Cloud Solution Provider (CSP) partners and Cloud Service Brokers. It provides CSPs all the right tools to consolidate their recurring revenues from the CSP program. They can not only bill their customers monthly, quarterly, annually or any way they want, for the Microsoft SKUs but can also exhibit a full service catalogue for their customers to pick and choose from. This way with Bill Byte CSPs can remain in control throughout, retaining complete ownership of their customer relationships.
